Two of the members weren't at the meeting but we discussed what we had done. Cooper was at home for the long weekend.

- Heidi talked about how she started on the lost items form
- Derek talked about how he set up email verification using gmail SMTP and how he installed libraries for swift mailer and env variables
- Created initial env variable setup so no sensitive information on github and better security
- Bug where RPI outlook doesn't receive verification emails although it works perfectly fine on gmail
- Next steps to try to see how to fix the bug
- Update schema to accept images for CDN
